

# Team Leader Report Week 9

## Progress report:

This week the team worked hard in the build up to the week 8 milestone presentation on Friday. We worked through more testing of the modules, some of which still needed to be tested and we got a full game working and displaying the game being played on a local server. We worked a lot with trello this week to ensure that every member knew exactly what issue was theirs and what they needed to work on, this is especially important because the modules are no longer so clearly defined.

David has been working on changing our code from JavaScript to Angular JavaScript. This allows for inbuilt mocking of http calls so we don't need multiple test frameworks. It also removes the need for a lot of JSP code. It allows us to bind html attributes to javascript variables to test the javascript variable has been updated rather than testing the DOM has been updated. He also worked on changing some of the array lists to linked lists to ensure our code works with the blockly linked lists. Aidan has been working hard with Mitchell on making the blocks more user friendly (and intuitive) and fixing some of the compilation errors when a user creates a bot. Ashraf has been working with fixing some of the UI scaling issues and general aesthetics of the pages. He continued working on the testing the UI using selenium in browser testing platform making the testing automated. Josh worked on code tidy up of the JSP's and helped with the user interface changes/issues. He created an about page for the site, to explain the use of the site and why it was created. He also helped brainstorm some ideas for blocks and name changes to make the blocks more intuitive.
